Type of contact lenses: □ Rigid □Soft □Extended Wear □CRT □Other

Are your contacts comfortable? □Yes □No

Do you have any concerns about your current contacts? _____

Every contact lens wearer should have an annual contact lens exam. During this exam, the doctor will assess the contact lens fit, check parameters and look for any medical issues arising from contact lens wear. A written prescription, good for one year, will be given. If you do not elect to have a contact lens exam, you will not have a current prescription to purchase contacts.

Do you wish to have a contact lens exam today?

□Yes □ No, I do not wish to have a current contact lens prescription

Contact lens patients require additional diagnostic services every year, which are **not included in the annual eye health evaluation**. The additional fee associated with the contact lens fitting is particular to each patient's needs. The fee covers any visits related to contact lens care and any fitting changes for 90 days.

To examine the health of your eyes, the Doctor will need to do DIGITAL RETINAL IMAGING or DILATION.

Please indicate your choice below.

DIGITAL RETINAL IMAGING

As part of your routine comprehensive exam, our doctors recommend Digital Retinal Imaging (DRI) which involves capturing a high resolution digital image of the interior of your eye through retinal photography and optical coherence tomography (OCT). Both procedures (4 scans in total) are the gold standard for preventative care and disease management.

The Daytona Optos provides a 200 degree field of view and can help identify the presence of retinal lesions, such as holes, tears, or detachments, which can be present *without* any signs or symptoms, and can cause permanent vision loss. This device offers a second screening called auto fluorescence, which allows the doctor to find many diseases (such as macular degeneration, nerve drusen, diabetic retinopathy) **BEFORE they appear in a normal dilated exam**.

The Zeiss OCT is another non-invasive imaging test that uses light waves to take cross-sectional pictures of your retina, the light-sensitive tissue lining the back of the eye. These measurements help with early detection of macular and optic nerve conditions again **BEFORE they appear in a normal dilated exam.**

The $39.00 fee for DRI is not covered by insurance.

You may decline DRI, and choose dilation at no extra charge**.** Dilation may result in blurred vision, especially for reading and light sensitivity that may last anywhere from 3-24 hours.

PLEASE INDICATE YOUR CHOICE:

☐ Digital Retinal Imaging ☐ Dilation

Under certain circumstances the doctor may recommend BOTH dilation and DRI.
